PRODUCT PROFILE

X006562 12" Quick Release Dust Cup with Dust Dumpa

APPLICATION

Donaldson SRG & SSG
Air Cleaners

HOW IT WORKS

When installed on the lower body assembly, the rubber connector vibrates during normal vehicle operation and gravity expels the precleaned dust.

The X006562 12" Quick Release Dust Cup with Dust Dumpa has been released as a replacement for the P902340 Cone Cup with Dust Dumpa.

Cone Cup with Dust Dumpa

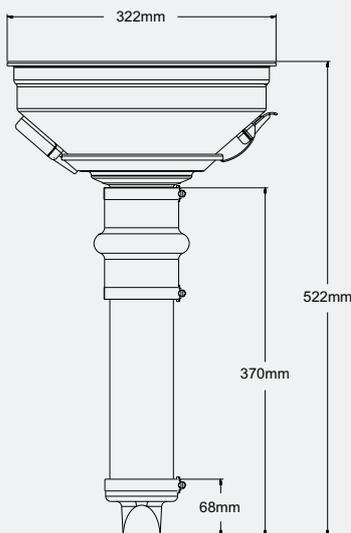

Quick Release Dust Cup with Dust Dumpa

quick release dust cup opened for easy view

The benefits of using the X006562 12" Quick Release Dust Cup with Dust Dumpa in place of the P902340 Cone Cup with Dust Dumpa are:

- ☑ The X006562 uses a quick release vacuator style dust cup that has a latched trapdoor rather than a fixed cone shaped cup;
- ☑ Monitoring the condition of the Donaclone (cyclone) precleaner tubes as well as contaminant build up in the bottom of the lower body is now a simple latch away;
- ☑ There is no longer any need to completely remove the dust cup to inspect the tubes, one latch and you're done;
- ☑ Maintenance costs are greatly reduced and machine uptime is increased as removing and reinstalling dust cups is very time consuming, plus there is always the danger that the o-ring that fits between the top of the dust cup and the bottom of the lower body of the air cleaner could be dislodged, or even fall off during this operation, resulting in loss of precleaner efficiency;
- ☑ The X006562 is also fitted as standard with the P618619 upgrade trapdoor gasket that ensures the seal between the trapdoor and cup is airtight. Any leak in this area will greatly reduce the efficiency of the precleaner tubes (refer Product Profile 10PB001 for more details);
- ☑ Dust Dumpa ensures that the dirt separated by the precleaner tubes is quickly expelled via the vacuator valve, which not only keeps the precleaner tubes clean and operating at peak efficiency, but also helps to prevent dirt build up in the bottom of the lower body. The clear tube makes monitoring the bottom end of the air cleaner much simpler, saving maintenance costs and increasing machine uptime (for more details about the Dust Dumpa, refer Product Profile 10PB001).
